

Scale 2000 Feet

This sketch shows the true relative position of the surveys designated there on, and as determined by a great extent, by Recent Recovery. Many inaccuracies having been discovered, and the findings upon the ground being substantially as stated in the original notes. The calls in the original recorded Field Notes when run S. 50° W. from the N.W. corner of Survey No. 207, for 1/2 mile to a point opposite the N.W. corner of Survey No. 132, S. Rodriguez was found to be at the latter corner, 1/2 mile North 30° W. of same. Survey No. 132, for S. Rodriguez is found upon the ground to be largely in scope of the number of acres called for. The N.W. corner of same being well identified by bearings upon the ground.

The figures in red show length of lines on the ground, those in black as called for in Field Notes.
