

San Antonio 18<sup>th</sup> Jan'y 1872

Hon Jacob Huchler  
Comdr Genl Office

Sir enclosed to find a sketch of part of the John Mc Muller Survey with that some New Surveys I made showing that the Survey of Isabel does not touch or go near the Mc Muller survey, and therefore intitle Isabel Rodriguez to a patent

I also give a rough sketch of the surveys on the San Genovino Creek so that Bexar County map may be rectified for the Medio Creek on the map take place of the San Genovino to its source. The whole length of the Medio is not over 11 or 12 miles at any rate I show on sketch about its very source and I show also where the San Genovino enters the Medina which will appear by referring to the field notes of Survey No 37 which states that the last line going to the River, enters on the East side of San Genovino Creek

Please let me know if anything more has to be done with Encuesta San Aguilas Survey

I remain Sir

Your most obedient Servt  
Charles Montague

Deft Surveyor Bexar District
