

By reference to the field notes I find that the Dedrick Meyer No. 121 calls to commence on the SW corner No. 120. But it cannot be the present No. 120 in view of von Brosche since this survey was made in the year 1855 & said No. 121 in 1847. So in laying down the surveys according to age and order, by the course & distance & secondly from adjacent original corners, I find the surveys substantially as shown in this map.

J. S. M. Moore  
Surveyor of  
San Saba County  
do certify that  
the above sketch  
gives a true &  
correct representa-  
tion of the survey  
as found on the  
ground.

And further that I located the  
surveys made in 1847 by beginning  
at the S.W. corner 151 Aug Hise & S.C.  
corner No. 152. This being a good original  
corner. from this corner I located  
all the surveys from No. 152 to 166 in their order  
by course & distance finding no more old corner  
as called for in field notes of said surveys.  
The surveys of 1855 generally had original corners  
which controlled the size of survey & course of line  
Re-survey made Dec 4th 5th & 6th 1890
