Dear Sir:

I send you a sketch of the Charles Clark and Robt. Foots surveys showing their connection with the adjoining surveys, as they actually run out on the ground: The plat correctly shows the surveys except I did not dot the meanders of the creek as given in J. N. of the Uri-Holbrook survey - I ran the lines of the Clark and Foots surveys on the 24th day of this month. Beginning at the S.E. Corner of the Nancy Ferguson survey - ran thence N 19° E. 1332 vs. to Clark's N.W. Cor. in the East line of J. Ferguson - Thence S 71° E. at 2332 vs intersected the W. line of the D. Gregg survey 2715 vs to Clark's N.E. Corner - Thence S 19° W 864½ vs intersected D. Gregg's S. line. 1332 vs to Clark's S.E. Cor. and Beginning the Foots at that point I ran S 71° E. 585 vs -

Shence N 9 E. 467 1/2 vs intersected Gregg's S.
line (365 vs N 71 W. from Stracener's corner in
said S. line). 600 vs to cor - Shence S 71 E 963
vs intersected Gregg's E. line - ~~continued~~ 1665.
vs and distance gave out 404 vs before reaching
the Berryman W. B. I ran the survey thence
around to beginning according to G. 20.
The blank. covers a greater part of the Dillard &
Stracener. 569 acres, and the Footi runs. Through
the Holbrook, and covers part of the Patterson and
Stracener 292 acres, and the Holbrook, runs on the
Stracener 292 acres 49 vs South of the Gregg S. B.
I notice all plats sent from the Genl. L. O. show
the Footi survey clear. of any conflict, and for
that reason I send you the within sketch.

I am very respectfully

Yours &c
J. M. Turner
Co. Surveyor Bell Co.
