

I herewith send you a connection of the surveys on the Brazos River by which the maps of Brazos County can be corrected and the surveys I have been making in that section may be made to fit on the maps which they will not do as it is now when the field notes of my surveys arrive and are compared with the maps you will see where they disagree and the cause of it. The meanders of the Brazos, except where the lines meet it, are put down by guess and of course are not correct but at the extremities of the lines they are correct.
