

File 1155 file 6^{9a}

Miram - 1st Clap
Cratts County.

Sketch

Hancock Smith

Filed January 2/54

Sketch of Explanation of
the surveys of Cratts Co.
under acts of penalty
showing that most of
the surveys of said Co.
are larger on the ground
as represented in their
resp. field notes.

The lines with pencil below show where the cuts would go and the black lines where the actually are

Nov 28 Dec 1853

The W. line of the M R Williams Survey is found by actual measure 2065 the South line 6025' varies from the S. E. corner of Chisolm's the lines do not meet over run to the N. E. corner of Andrews this survey was called for from its eastern corner the adjacent lines being all about 100' over one mile and the S. W. and N. W. corners of Andrews called for in preying when run do not run with in 200' of the middle of the Dubois survey where it ought to be making a difference of

800' varies eastwardly I declare under oath and and penalty in consequence that I have traced and hunted these lines and according to the surveys above the Brady survey the Brady survey cannot interfere with the H. Smith survey if its boundaries are not over 2600' long also a connection made below from the B. Chisolm 1280 to Lygton Parkers survey 4600' varies will show that an allowance of 100' varies per mile over will not let the conflict take place I run around the best boundary of S. N. Reed 2 surveys V. Browning with overruns also H. Odell the W. line is 150' varies longer than called for the other bound in preying I run by distance and do not come by 1/2 mile to the W. Wagner and B. Chisolm survey the northings and Southings of the block of 600 on Duffness are seem correct I run from a with has bearing trees N 60 E 1900 and S 30 E 3 miles S 60 W 1900 to B where there are bearing trees all lines runing through timber and bush seem more correct than that in open country where chain carriers would go to fast and the aft carrier pick up the stick before the former stop
