

Note = after two measurements of Peck's N.E. boundary I found the distance to be 3128 vs. from the North bank of the Chicahita to the South bank of Little Brushy and after Carefull Examination no line or bearing trees could be found as called for in the third and fourth corner of Peck's Survey. I have no hesitation in saying that the line does or did not exist. I therefore plan Thompson's and Hughes Survey in accordance with the foregoing sketch in the sketch as sent me by the Land Office the plot of 1280 acres for N.B. Thompson the field notes of which Survey never was perfected but the Survey of 800 acres as in the above sketch being the balance of Certificate will shortly be forwarded to the Land Office

Victoria, May 24th 1849
