Hon. J. J. Turrell,
Austin, Texas

Dear Sir:

Yours of the 30 inst to hand
and contents noted.

I stated in my letter of the 16th inst
that the cases of the river surveys
96, 97, 98 had not been followed;

as the land is situated it would
be impossible to locate same as
the river has changed its course
several times since 1839, when
Government surveyed them, and as
they were not properly surveyed at
that time, as the field notes show by
the difference in width of the river
front and back ends in
some surveys the actual difference
being as much as 200 yards.

J.P. 2 Laredo, Tex. 190

As the river meanders are also very different running at present $\approx 80^\circ$ approx. the side boundary lines of these surveys either fall to go or shoot or overrun a great deal.

I found that the West boundary lines of #108 T.B. Self, #96 Jas. Hance #110 Sykes were not established, there being corner stones and fence lines on them, made by Mr. Fouch in 1880 about; and I traced them to control my surveys there being no other data, for at Ft. Excel there was evidence of any old corner, and farther down the river conditions were the same.

I lay an on my survey from the N.W. cor. of No. 96 Jas. Hance trace the survey adjoining it, no 97

3
 Hunt its full amount of acre
 and the width of 1444 vs called
 for by the patent.

On surveying the ranch border,
 of all these river surveys,
 from the W. bdy of the E. B. Bell
 no. 108 to W. bdy of #96 Joe. Hance
 I found that all of the river
 surveys had their full width in
 land as called for by their pths,
 East from survey no 96 Joe. Hance to
 N.E. bdy of 110 Psykes there is
 considerable shortage, and as
 survey no 94. T. H. Hall is an
 unpatented survey the shortage
 was thrown into it.

I stated above that all the
 river surveys had their full
 width, but I found that survey

No 105 Wallace, had an error
 in width of 96 varas. Its S.W. and
 N.E. corners being established and
 measuring from one to the other we
 found it had 1540 vs in stead of
 1444.

The Red lines on blue print indicate
 the lines we actually ran out.

Found established corners for all
 surveys except 97 and 98.

Sketch also shows how we surveyed
 these. Trusting that this will be
 sufficient data for you, I remain,

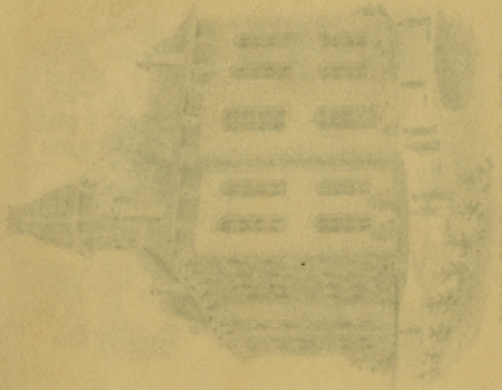

Very truly,
 E. J. Fisher

Deputy Surveyor of Webb Co.
