To the Commissioner  
Genl Land Office  
Austin Texas

In regard to  
the Williford Cartwright League  
and the Geo Foley Survey, and  
the surveys adjoining them on  
the south, I can give only the  
following explanation.

The Foley Survey, according to  
reports made to me by two Deputy  
Surveyors, conflicts with the Cart-  
wright League 608 vs from East  
to West, and the S.W. corner of the  
Foley Survey is 330 vs  $N 19^{\circ} W$  from  
the South line of the Cartwright League  
one of said deputies makes this East-  
distance 329 vs. The S.W. corner of  
the Foley is proved by its bearings  
and by three marked lines running  
from it, one line running  $S 70^{\circ} E$   
another  $N 71^{\circ} E$  and the other  $N 19^{\circ} W$ .

The Willis West Survey calls for  
the S.E. corner of League No 4 and  
give the same calls for bearings  
as league No 4. The West Survey then  
calls to run  $N 19^{\circ} W$  590 vs to the  
S.W. corner of the Foley Survey, and

gives the same bearings as the Foley Survey. Now to start from the S.E. corner of League No 4 & run to the S.W. corner of the Foley Survey, the course would be ~~S 80° W 69° N.~~

Taking the S.E. corner of League No 4 for the Beginning of the Willis West Survey and running out the calls of said West Survey and there is no other corner found: Beginning 590 vs S 198 from the S.W. corner of the Foley Survey and then running out the call of the said West Survey and all the other corners of the Survey are reached and the lines found plainly marked.
