

In reading your short course booklet I was interested in the reference to locating County lines and old Corners and the age of the ones located.

In the Year 1940 while running the Property Surveys for the Dennison Dam I was assigned the duty of locating the County line between Cooke and Grayson County, These markers were places in 1870 of 6" square Bois d' Arc Posts and I was fortunate enough to locate two and deffinitely relocate the County Line. I also found an Abstract Corner that was placed in 1838 and after 102 years was found in very good condition with the Surveyors name, Declination used and other pertinent data on the stone.

This for your information in the event you are interested.

In the reference to locating County lines and old Corners and
the age of the ones located.
In the Year 1940 while running the Property Surveys
for the Denton Dam I was assigned the duty of locating the
County line between Cooke and Grayson County. These markers
were placed in 1870 of 6" square bolts of. Are posts and I was
fortunate enough to locate two and definitely relocate the
County line. I also found an Abstract Corner that was placed
in 1838 after 15 years was found in very good condition
with the surveyors same. Declination used and other pertinent
data on stone.
In reading your short course booklet I was interested.
